SCIENCE & ENGINEERING

APPRENTICESHIP PROGRAM

Applied Research Laboratories
The University of Texas at Austin

ARL:UT is the university’s largest organized research unit. Although technology development and application is our primary goal, we also value the university’s educational mission and, through this program, have helped thousands of students gain valuable experience that shaped their careers in science and engineering.

WHO
Graduating seniors who will attend a senior college in the fall and who have both applied and been admitted to UT Austin are invited to apply. Preference is given to students majoring in electrical, mechanical, and aerospace engineering; physics; mathematics; and computer science.

WHAT
The apprenticeship program is a competitive program designed to provide incoming college freshman with an idea of what scientists and engineers do in their chosen fields. Apprentices are appointed to full-time paid positions and assigned projects that can be completed during the summer.

WHERE
Applied Research Laboratories, J.J. Pickle Research Campus

WHEN
June 6 through August 11, 2016
